## 1 Limericks

Even though it'll be difficult to fully understand,  
I'm choosing C++ as the language where I land.  
    Though the syntax is like a curse,  
    and pointers are even worse,  
I'll get the extra ten percent, just as planned!

I was thinking Java as the language to choose,  
but since I've used it a lot I wanted different views.  
    Maybe I could've picked an old language like COBOL,  
    but I'd rather get hit in the head by a snowball.  
I think I'll stick with C++, and that's great news!
